## Compliance Standards

NECA C 4520: General Clauses on Control Switch

NECA C 4522: General Clauses on Control Cam Switch

JIS C 8201-5-1: Low-Voltage Switch Unit and Control Unit - Chapter No.5  
Control Circuit and Switch Element  
-Part 1:Electrical Equipment Control Circuit.

JIS C 0920: General Clauses on Water-Proof Test on Electric Equipment and Wiring Materials.  
IP40 (Panel Surface)

## Rated Values and General Characteristics

※ See page A-71 for explanation about Twin-Contact.

Specification Item	Single Contact(Standard)	Twin Contact ※	
	Silver Contact	Silver Contact(V-Type)	Gold Contact(G-Type)
Rated Insulation Voltage	600V		
Rated Flowing Current	10A	5A	1A
Contact Resistance	100MΩ or up (500V Megger)		
Contact Resistance(Initial Value)	50mΩ or less	20mΩ or less	15mΩ or less
Temperature Rise	Contact	65°C or under	
	Terminal	50°C or under	
Impact Resistance	50G		
Vibration Resistance	2G		
Storage Temperature Range	-40°C~+70°C (but,Shall never cause freezing.)		
Operating Temperature Range	-20°C~+60°C (but,Shall never cause freezing.)		
Operating Humidity Range	45%~85%Rh (but,No dewdrops.)		
Withstand Voltage	AC 2,500V / One (1) Minute		
Impulse-Withstand Voltage	±7,000V (1.2/50μs) / Three (3) Times		
Minimum Operating Voltage and Current(Its ambient circumstances must be good.)	24V 50mA (1.2VA)	5V 10mA (0.05VA)	1V 1mA
Overcurrent Resistance	200A 2 seconds	100A 2seconds	20A 2 seconds
Switching ON/OFF Frequency	1,200 times / hour		
Switching ON/OFF Speed	2πrad/second		
Mechanical Durability	1 million times	300,000 times	
Electrical Durability	AC	100,000 times	
	DC	100,000 times	

## Rated Working Voltage and Current(Beaking Performance)

Rated Working Voltage (V)	DC (Time constant:25ms)						AC (Power Factor:0.4)

# Operational Instructions

## Instruction on Rotating Operation

Operation Method	Descriptions
Manual Return(Notch)	The handle stays at the specified position even after detouching the hand from the handle.
Spring Return	The handle returns automatically to the origin from specified position. (Limit is set at the point of origin.)
Manual & Spring Return (Hybrid)	Composite operation based on Manual and Spring Return Methods.
Spring Return with Position-Sensing(Click)	In this method,you can feel every position at which the handle is set during your operation.

## Operational Position Code

30° Notch

45° Notch

45° Notch  
(Separation from  
the center at 22.5°)

60° Notch

60° Notch  
(Separation from  
the center at 30°)

90° Notch

# How to Choose Type

**B N - C201 - G0 - C - PK K - N - 0 (W)**

① Basic Type  
② Operational Method  
③ Contact Diagram Code  
④ Contact Type

⑤ Terminal Cover  
⑥ Handle Type  
⑦ NP Stand  
⑧ NP Type  
⑨ NP Letter  
⑩ Indicator

## ① Basic Type

This shows NP shape & attachment type.  
Choose your desired one from the list below.

Code	Spec.
<b>B</b>	Screwing Type 
<b>AB</b>	Screwing Type(Large NP) 
<b>JB</b>	One-Touch Attachment Type) 
<b>YB</b>	One-Touch Attachment Type) 

## ② Operational Method(See A67~A-70 for Details)

Choose your desired Operation Method.

## ③ Contact Diagram Code(See A79~A-98 for Details)

Choose your desired Contact Diagram from the List of Contact Diagram.

Fill your desired Contact Diagram specifications on the order sheet on A-115~A-117 for submission to us.

(In case of Made to order Contact Diagram)  
Pls specify your order by writing [No. of Unit+X] as follows;

For Example : In case of 3 units ... 3X  
In case of 5 units ... 5X

## ④ Contact Type(See A71 for Details)

Choose your desired contact the choices below.  
Standard(Silver Single) / Silver Twin Contact / Gold Twin Contact

## ⑤ Terminal Cover(See A-72 for Details)

Choose whether Terminal Cover is required or not.

## ⑥ Handle Type(See A-72~A-73 for Details)

Choose your desired Handle Type and Color.

## ⑦ Name Plate Stand(See A-74 for Details)

Choose your desired color of NP stand.

## ⑧ Name Plate Type(See A-74 for Details)

Choose your desired type(materials) of Name Plate.

## ⑨ Name Plate Letter(See A-74~A-77 for Details)

Specify your desired letter to be used for Name Plate.

## ⑩ Indicator(See A-78 for Details)

Indicator shall be attached only when Spring Return(45°) is selected as operational method.

\*Indicator cannot be attached to AB-type, YB-type or Acrylic Name Plate.

# Operation Method

## In Case of Rotating Operation Only

Choose the proper code in the list below in case of Rotating the Handle to Left or Right Only.

Code	N	R	RX	
Rotating	Manual Return	Spring Return	Spring Return(Click)	
Operation Pattern	□	← ● →	← ← ● → → →	
Code	R2	R8	NR2	NR8
Rotating	Spring Return to 2.	Spring Return to 8.	Manual return from 8 to 1. Spring Return from 2 to 1.	Spring return from 8 to 1. Manual Return from 2 to 1.
Operation Pattern	← ●	● →	□ ● →	← ● □

## In Case of Rotating and PULL/Push Operations

Switch Unit with Handle for Pull/Push Operation is manufacturable only in case that its operational angle is 45° or 90° . Pull/Push Operation means that an operator should push or pull the handle for rotating it.

Explanation of Pull/Push Operation	Manufacturable Operational Position		
<p>Top View</p>	<p>45° Notch</p>	<p>90° Notch</p>	<p>90° Notch (Separation from the center at 45°)</p>

Code of Pull/Push Operation is composed of [Rotating Operation Code] + [Pull/Push Operation Code] + [Pull/Push Position No.].

Code		Pull/Push Operation	Rotating Operation	
Rotating	Pull/Push		Pushing Position	Pulling Position
N	SF□	Spring Return to Pushing Position	Unrotatable	Rotatable
R	SL□		Rotatable	Unrotatable
	PF□	Manual Return	Unrotatable	Rotatable
	PL□		Rotatable	Unrotatable
	TF□	Spring Return to Pulling Position	Rotatable	Unrotatable
	TL□		Unrotatable	Rotatable

Fill in the □ the proper code of Operational Position for Pull/Push Operation.  
Mark [0] in case that Pull/Push Operation is needed at every Operational Position.  
Contact us for details as for the combinations of manufacturable units.

Example of Commonly Used Pull/Push Operations

Code	NSF0	NSF1	NSF8	NPF0	NPF1	NPF8
Rotating Operation	Manual Return			Manual Return		
Pull/Push Operation	Rotating Operation is Possible at Pulling Position /Spring Return to Pushing Position			Rotating Operation is Possible at Pulling Position /Manual Return to Pushing Position		
Pull/Push Position	Every Position	1	2	Every Position	1	2
Operational Plan						

Code	NPLO	NPL1	NPL8
Rotating Operation	Manual Return		
Pull/Push Operation	Rotating Operation is Possible at Pushing Position /Manual Return to Pulling Position		
Pull/Push Position	Every Position	1	8
Operational Plan			

Code	RSF1	RSL1	RPF1	RPL1	RPL8
Rotating Operation	Spring Return			Spring Return	
Pull/Push Operation	Rotating Operation is Possible at Pulling Position /Spring Return to Pushing Position	Rotating Operation is Possible at Pushing Position /Spring Return to Pushing Position	Rotating Operation is Possible at Pulling Position /Manual Return to Pushing Position	Rotating Operation is Possible at Pushing Position /Manual Return to Pulling Position	
Pull/Push Position	1	1	1	1	8
Operational Plan					

Code	NTF0	NTL0	RTF1	RTL1
Rotating Operation	Manual Return		Spring Return	
Pull/Push Operation	Rotating Operation is Possible at Pushing Position	Rotating Operation is Possible at Pulling Position	Rotating Operation is Possible at Pushing Position	Rotating Operation is Possible at Pulling Position
Pull/Push Position	Spring Return to Pulling Position		Every Position	
Pull/Push Position	Every Position		1	
Operational Plan				

## Key-Handle Operation(Only for Rotating Operation)

This section explains how to select Key-Handle with an original key.(Only 45° and 90° Operation can be manufactured.)

Key-Handle Code is configured with [Rotating Operation Code + Key's Insertion/Pulling position No.]  
Fill the Key's Insertion/Pulling Position No. into □.Fill □ with [0] if you insert/pull the Key at every operational position. Choose the Key No. when you order.

### In Case that Key is Inserted into Only One(1) Place:

Code	Rotating Operation Mark	Operation Angle	Drawing of manufacturable Notch	Key's Insertion/Pulling Position
NK□	Manual Return □	45° 90°		At any 1 place
RK1	Spring Return ↔	45°		At 1.
R2K2	Spring Return to 2. ←	90°		At 2.
R8K8	Spring Return to 8. →			At 8.
NR2K□	□→	45°		At 1. or 8.
NR8K□	←□			At 1. or 2.

### Applicable Key

KEY No.	Key's Shape	Remarks
B9	Convex Shape	Standard Items
B8	Concave Shape	
B3	Convex Shape (Different Pin Position)	Made to Order
B5		
B7		
B1-R	Convex Shape (Only for Clockwise Operation)	
B1-L	Convex Shape (Only for Unclockwise Operation)	
B2	Concave Shape (Different Pin Position)	
B4		
B6		
B10-R	Concave Shape (Only for Clockwise Operation)	
B10-L	Concave Shape (Only for Unclockwise Operation)	

**In Case that Key is Inserted into Two(2) Places:**

Code	Rotating Operation Mark	Operation Angle	Drawing of manufacturable Notch	Key's Insertion /Pulling Position
NK0	Manual Return <input type="checkbox"/>	90°		At Two(2) places (8. & 2.)

**Applicable Key**

KEY No.	Key's Shape	Remarks
B8X	Convex Shape	Made to Order
B9X	Concave Shape	

**In Case that Key is Inserted into More than Three(3) Places:**

Code	Rotating Operation Mark	Operation Angle	Drawing of manufacturable Notch	Key's Insertion /Pulling Position
NK0	Manual Return <input type="checkbox"/>	45°		At More than Three(3) places

**Applicable Key**

KEY No.	Key's Shape	Remarks
B2X	Convex Shape	Made to Order
B3X	Concave Shape	

**Reference**

<Key Diagram for Reference>

# Contact Type

Be sure to specify a proper Integration Unit by referring to the table below, if you choose Silver Twin Contact or Gold Twin Contact.

Code	Contact Type	Designation Example of Integration Units of Silver Twin/Gold Twin Contact	
Nothing Marked	Silver Contact (Standard)	-	Silver Contact is applied to all the contacts.(Standard)
V	0	V0	Silver Twin Contact is integrated into all the units.
	□	V5	Silver Twin Contact is integrated into the 5th unit.
	□~□	V1~3	Silver Twin Contact is integrated into the 1st~3rd units.
	□·□	V1·10	Silver Twin Contact is integrated into the 1st and 10th units.
G	0	G0	Gold Twin Contact is integrated into all the units.
	□	G5	Gold Twin Contact is integrated into the 5th unit.
	□~□	G1~3	Gold Twin Contact is integrated into the 1st~3rd units.
	□·□	G1·10	Gold Twin Contact is integrated into the 1st and 10th units.

## Reference

### ❖ Differences between Single contact and Twin Contact

Structure of Contact Unit of B Type Cam Switch

Silver Single Contact (Standard)

Silver Twin/Gold Twin Contact

Wipe Structure of Contact

As illustrated in above, the movable contact slides by about 0.2mm from the start of contacting to the end of the contacting. The material used in the movable contact in Twin Contact is phosphorous bronz. Therefore, the contact has a wiping function to wipe off any oxide-coating or sulfide-coating which happens on the contact surface.

←With the convex-shape of the movable contact, stable contact resistance was realized.

#### • Higher Contact Reliability (Silver Twin Contact)

We adopted cross bar contact(Bonded contact),not plated contact in order to make its contact reliability higher.This type of contact has been used in railway trains thanks to such heigher reliability.

#### • Minute Voltage/Current Usage (Gold Twin Contact)

In the field of minute current, coating or sulfide caoting on the contact surface cannot be removed even by use of arc,which may lead to a rise in contact resistance and cause a contacting failure. However, Gold Contact(Cross bar contact is used for its movable contact) is able to control any rise in contact resistance thanks to its materials' property.Unlike plated contact,no pinholes happen. Therefore,very high level of reliability is secured in case of Gold Contact.

Gold Twin Contact has been used in chemical plants,especially in the environment where any coating tends to happen on contacts and in the field of minute current used for sequencer control and so on.

## Terminal Cover

Side Terminal Cover is for protecting the terminal unit from workers' fingers and hands.  
 Upper Terminal Cover is for protecting the terminal unit from falling parts.  
 The combined use of Side Cover and Upper Cover is impossible.

Specification	No Terminal Cover	Side Cover(1~6 Units)*	Upper Cover(1~12 Units)
Code	No Code	C	LC
Appearance			

\* Side Cover covers from the side of End-Plate to 6th units in case of 7 or more units.

## Handle Types

### No Handle

Code	NN

### Handle (Standard Size)

Handle Shape		Chrysanthemum	Pistol	Oval	Stick

LB w/Signal Light		2	2	2	2	2	2
LB w/o Signal Light		3	3	3	3	3	3
MSB w/Signal Light		5	5	5	5	5	5
MSB w/o Signal Light		5	5	5	5	5	5

## Remarks

### ❖ Contact's Operation Types and How to Indicate them

Operation is indicated from the handle of Operation Switch.

※Standard Terminal Numbers go like this : 11-12, 13-14, 21-22, 23-24...

Contact's OperationType	How to Indicate	Details on Operation
Single Contact		The contact between the terminals turn ON at the designated positions(●).
Continuous Contact		Contacts on the thick horizontal line turn ON continuously.
Lap Contact (For 45°/90° Operations only)		Two or more contacts. One of the contacts turns OFF at the halfway of a notch while other(s) turns ON. Lapping points are connected with a dotted line.
Residual Contact (For Spring-Return System·For 45° Operation only)		Contact turns ON at a ○-marked position. Even when an operator returns the handle to the original position, contact stays ON. Then, when the operator moves the handle in an opposite direction, contact turns OFF and returns to the original status.
Pull/Push Contact		Contact turns ON or OFF by pulling or pushing. Contact doesn't ON or OFF by rotating. ○ means contact turns OFF at pushing position, and turns ON at pulling position. ● means POC turns ON at pushing position, and turns OFF at pulling position.

# Order Method of Customized Contact Diagram

Contact Diagram Configuration is composed, as below-illustrated, in the order of Pull/Push Contact, Normal Contact (Single Contact/Continuous Contact), Lap Contact and Residual Contact from the Handle. Therefore, please be sure to write down in the order of Pull/Push Contact, Normal Contact (Single Contact/Continuous Contact), Lap Contact and Residual Contact from the upside when you draw the Contact Diagram.

## Describing Order of Each Contact

# Instructions & Precautions on Ordering Customied Contact Diagram

## Principles on Unit Combinations

- Single contact and Continuous contact may be combined in same unit. Each of other types of contacts ( Pull/Push, Residual and Lap Contacts) cannot be combined with any of the rest ( other types of contacts) in the same unit. (This is because one (1) cam is used per unit. See Cam List on Pages A-101~103 as for the Contact Combinations Manufacturable.)

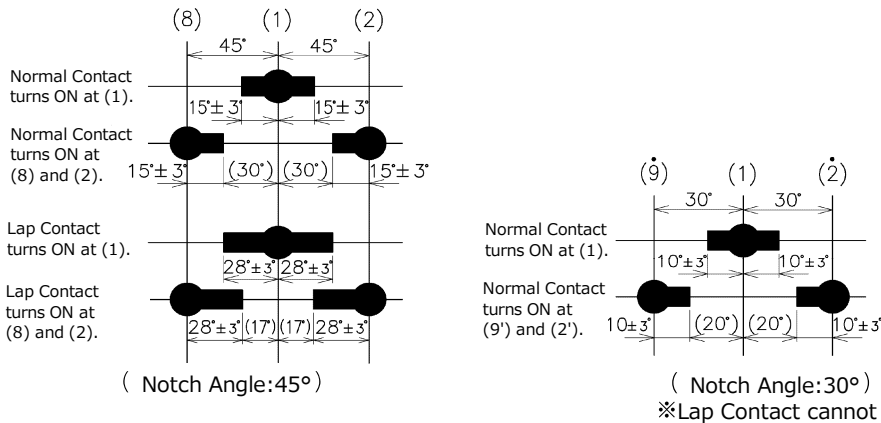

- One (1) Unit Comprises of Contact with two (2) circuits. Because the cam (cam's shape) is positioned at the angle of 180° of a couple of contacts, your requested contact diagram may not be manufactured in one (1) unit. (Especially in case of five (5) notches : 180° or more, two (2) unit shall be configured as shown below.)

As shown in the left figure, the Cam rotates at 180°, the contact on the opposite side turns ON.

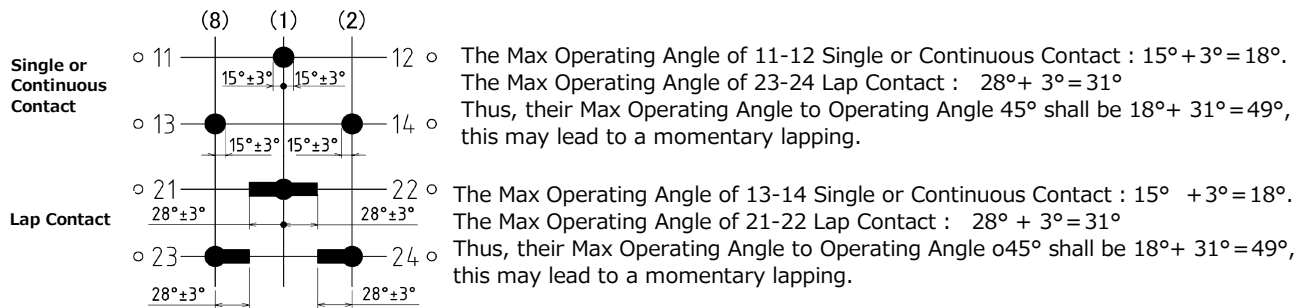

## Operating Angle and Operating Leeway Angle

As for Operating Angle and Operating Leeway Angle of Normal Contact (Single/Continuous Contacts), and Lap Contact, such angles are set as follows for controlling.

## Precautions on Momentary Lap

As for Single Contact, Continuous Contact and Lap Contact, leeway (allowance) angle of  $\pm 3^\circ$  is set for their respective operation angles. Therefore, in case of the following Contact Diagram in which Single Contact (or Continuous Contact) and Lap Contact coincide, such Contacts may cause a lapping momentarily.

## Max. Number of Units & Max Number of Contacts

### In case of General Type

Operational Methods	Rotating	Manual Return	Spring Return / Complicated Type (※)	Manual Return	Spring Return / Complicated Type (※)	Manual Return	Spring Return / Complicated Type (※)	Click Type
	Pull/Push	-	-	Manual Return	Manual Return	Spring Return	Spring Return	
Max. No. of Units		20	12	16	12	16	12	3
Max. No. of Simultaneous Open Contact		16	6	14	6	14	6	3
Max. No. of Lap Contacts		10	3	8	3	8	2	2
Max. No. of Residual Contacts			6		6		6	
Max. No. of Pull/Push Contacts				6	6	6	6	
Max. No. of Simultaneous Open Pull/Push Contact				6	6	4	4	

### In case of Key Handle Type

Operational Methods	Rotating	Manual Return	Spring Return / Complicated Type (※)
Max. No. of Units		16	12
Max. No. of Simultaneous Open Contact		14	6
Max. No. of Lap Contacts		8	3
Max. No. of Residual Contacts			6

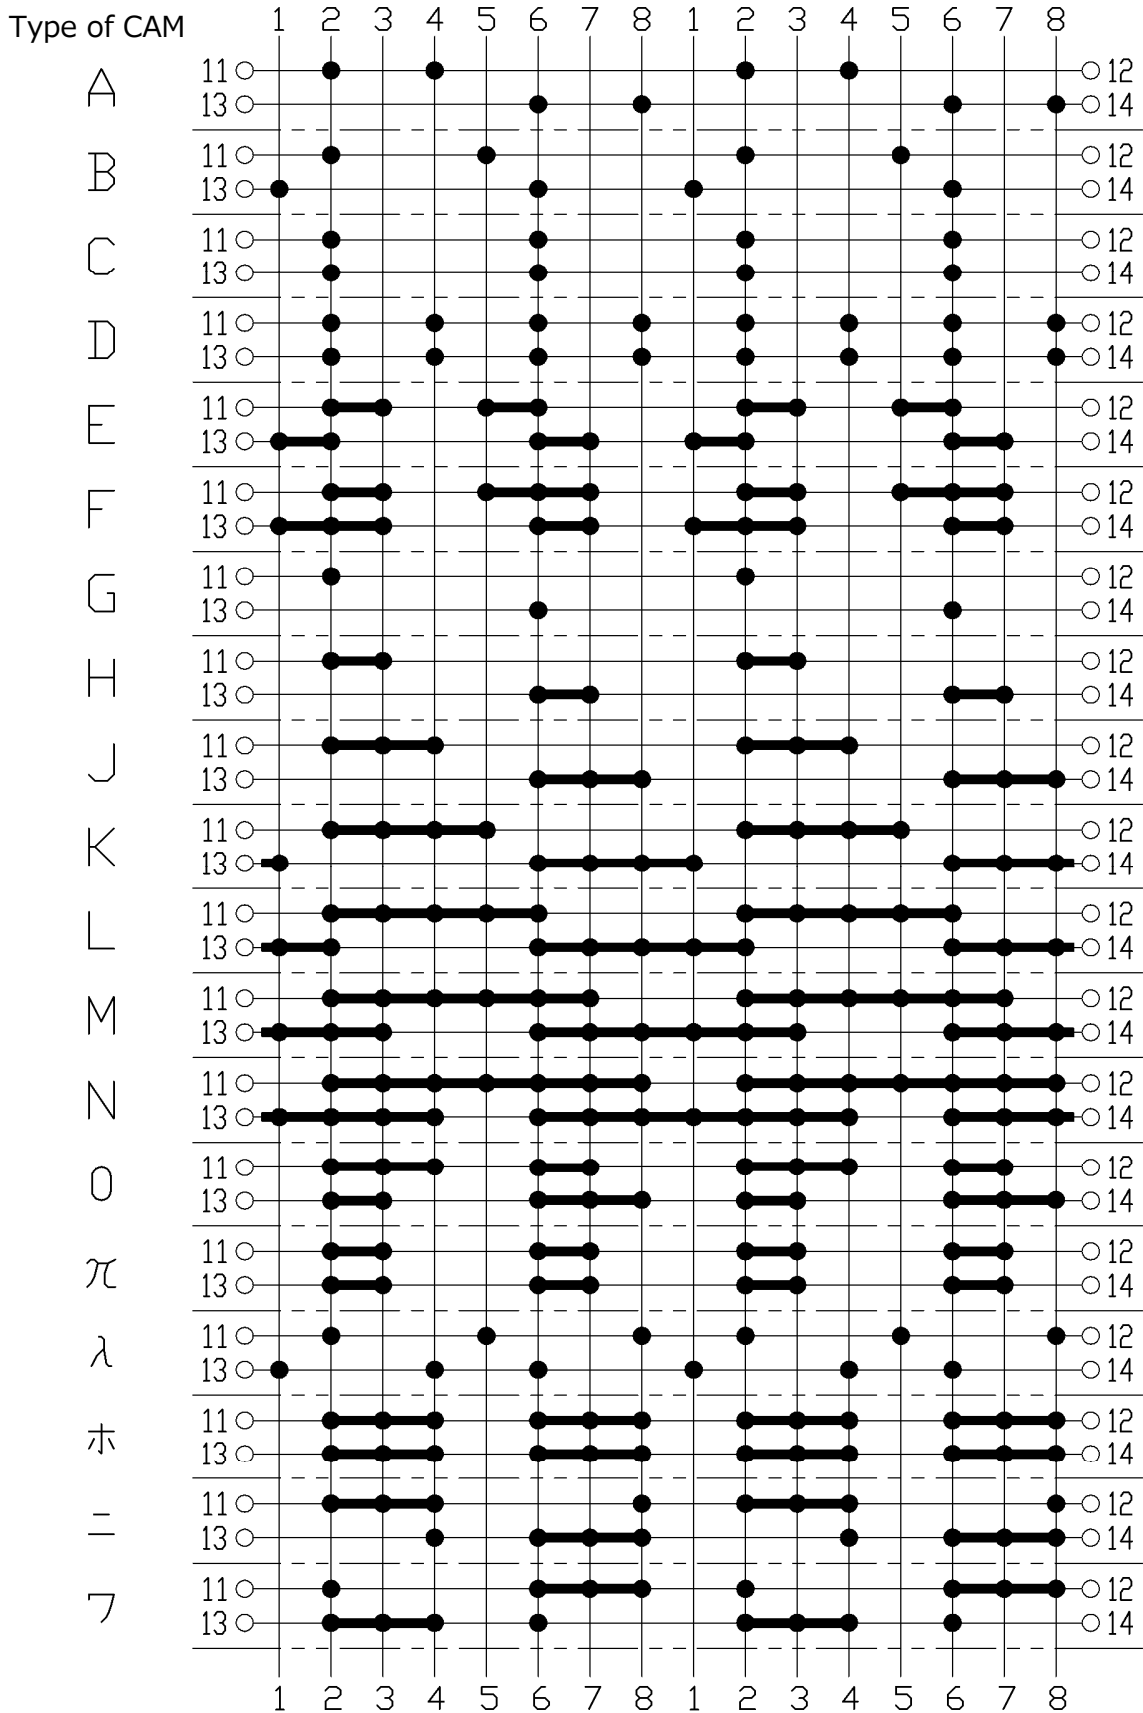

(※) Contact us about the manufacturing of [90° Spring-Return-Type Operation System.]

- Maximum Number of Simultaneously Open Contacts means that the number of contacts, which stay ON at each position and also which are shifting from ON-status to OFF-status in case of rotating operation, is most in number. This Maximum Number of Simultaneous Open Contacts means the maximum number of such type of contact. However, the number of Simultaneously Open Contacts manufacturable in case of Spring-Return means the maximum number of such type of contact in the process of returning to the central position from the left or right position.
- Complicated Type indicates that one side uses Spring Return System and other side uses Manual Return System.
- As for unit integrated with Pull/Push Contact and Residual Contact, They can be manufactured up to three (3) units.
- As for Twin contact, contact us for technical details. This type has fewer contacts due to differences in Contact Pressure Specification.
- Be careful as for Rotating Operation in case of Manual Return, the operation may come to stop on the halfway between the notches. Therefore, be sure to conduct the switchover operation without fail.

B1-L	Convex Shape(Unclockwise)	B10-L	Concave Shape(Unclockwise)
B2X	Convex Shape (More than 3 Positions)	B3X	Concave Shape (More than 3 Positions)
B8X	Convex Shape(2 Positions)	B9X	Concave Shape(2 Positions)

❖ Standard Size Handle      ❖ Large Size Handle

Code	Shape	Code	Shape
R	Chrysanthemum	AR	Large Chrysanthemum
P	Pistol	AP	Large Pistol
V	Oval	AV	Large Oval
S	Stick	AS	Large Stick
Y	Arrow ※ 1		
F	Boat		

❖ Special Handle(Black Only)

Code	Shape
G	Ball ※ 1,2

※ 1 Arrow Handle, Ball Handle are Black only available. Also these Handles are not available in case of Key Handle Operation.

※ 2 Because of difference of mounting method, Ball Handle cannot be replaced from other shapes of handle.

## Name Plate Stand

Fixing screws are not attached to the Name Plate Stand, need to order Screw Set shown on Page A-107 separately.

Model:  - E

Code	Color
K	Black(Color close to N1.5)
A	Gray Blue(Color close to 7.5BG4/1.5)

※ Gray Blue Color is not available in case that Basic Type is JB or YB-Type.

Code	B	AB	JB	YB
Measurement	57×52	65×60	56.7×56.7	
Appearance				

## Name Plate Frame

Name Plate Frame for One-Touch mounting type NP. Only for JB-type and YB-type available.(Black Color only)

Code	JB-FJK	JB-FJK(S10)	YB-FK
Application	JB-Type(NP Thickness:0.5mm) (For Alminius/Stainless NP)	JB-Type(NP Thickness:1.0mm) (For Acrylic NP)	YB Type
Measurement	60×60	60×60	73×60
Appearance			

## Name Plate

Fixing screws and Indicator are not attached to the Name Plate, need to order Screw Set shown on Page A-107 separately.

Model:  - N

(W)

### ❖ Option(Indicator/Key Handle)

Code	Spec
Nothing Filled	Standard
(W)	w/t Indicator Hole
(K)	For Key Handle(φ15)

※ Indicator is not available in case that Basic Type is AB-Type or YB-Type or Acrylic NP.

※ Choose Key No. from Page A-69~70.

### ❖ Name Plate Letters

Code	Spec	Remarks
0	Blank	
X	To inscribe Customized Letters	Fill your desired Letters in the Order Sheet on Page A-114~117.
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	Pre-Printed NP	Choose your desired Letter No. from NP List on Page A-77.

### ❖ Material

Code	Material	Thickness(mm)
Nothing Filled	Standard Aluminium NP(Screen+Baking Clear Coating)	0.5
S	Stainless Name Plate(Delustering Polish)	0.5
A	Acrylic Name Plate(Backside's Inscription Letter Color: Black)	1.0

※ Acrylic Name Plate is not available in case that Basic type is YB-Type.

### ❖ Basic Type

Code	Basic Type
B	B-Type
AB	AB-Type
JB	JB-Type
YB	YB-Type

## Indicator

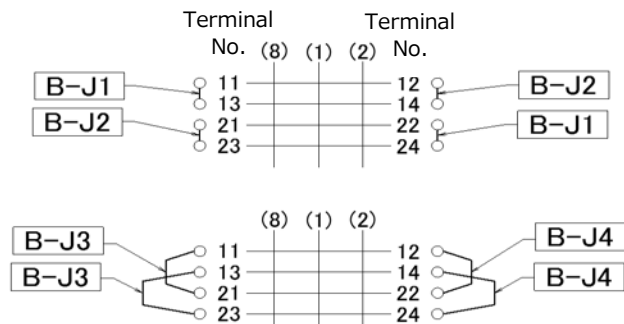

Model : B-T1

※ Indicator can be additionally mounted only when Operation method is Spring-Return-Type(Operational Angle45°). Indicator cannot be mounted in case that the basic type is AB-Type and YB-Type, and in case that Acrylic Name Plate is used. See page A-112 for Assembly Method.
